

<http://www.returnonwater.com>

Are you drinking "CONTAMINATED," "DEAD" or "LIVE" water? Which is it?

Do you know what is in the water you drink?

Do you know where the water comes from you are drinking?

Do you have any idea about the cost versus quality of water you drink?

Do you have any idea how important water is to your health?

These are major questions. Water supplies are contaminated and there are federal mandates for water to comply with minimal standards. Check with your local water municipality and they will tell you. Are you sure they are telling the TRUTH? It is not what people do not know, it is what people know that just ain't so! – Will Rogers.

The precursors, or chemical forerunners, of acid rain formation result from both natural sources, such as volcanoes and decaying vegetation, and man-made sources, primarily emissions of 'sulfur dioxide' and 'nitrogen oxides' resulting from fossil fuel combustion. Acid rain occurs when these gases react in the atmosphere with water, oxygen, and other chemicals to form various acidic compounds. The result is a mild solution of sulfuric acid and nitric acid. When sulfur dioxide and nitrogen oxides are released from power plants and other sources, prevailing winds blow these compounds across state and national borders, sometimes over hundreds of miles.

The result, contaminated water. Water is altered by contaminants and the pH (potential hydrogen, a measurement of acidity and alkaline content) in your water does not do what it is supposed to do to your body; (1) alkalize your organs and cleanse the acidic properties out of your organs; (2) perform as an anti-oxidant and remove the toxins from your organs; (3) deliver the alkaline (high pH 8.5 to 9.5) and anti-oxidation (greater than 30 times regular water) to all of your organs with a surface tension and cluster size smaller than most water, at least 7 times smaller. This gets the water to your brain and eyes in seconds and your entire body in minutes. Otherwise bottled water, well water, river water, reverse osmosis water, distilled water, city water, etc. does not perform well and your body will have to rob the nutrients from other organs, tissues, bones in order to cleanse and feed your body daily. Thereby, shortening your life span by many years.

You can see this is really simple. But we have been told and told and told that our government has provided the best water there is. Of course our water in the USA, as an industrialized nation, is better than many other countries; we still have issues that need attention. Do not be fooled by those that try to sell you distilled water, reverse osmosis water, bottled water, city water, etc. Reverse osmosis and distilled water does clean the water, but at the same time it robs the water of the good

minerals as well. You would be better off drinking your own urine. Can you imagine what happens to your body when you drink water that has all the minerals removed, good and bad. The water robs your body organs, tissues, and bones of the minerals it needs to cleanse and feed your body's organs.

Now it has to be clear. Reverse osmosis water; distilled water; ionized water; city water; all of these water processing methodologies do not remove the acids, copper, lead, other metals, insecticides, phosphates, drugs (yes prescription and illegal), chlorine, chloramines, lye, fluoride, and other unwanted contaminants from your drinking water. Remember, it is not what people do not know, it is what people know that just ain't so! What you do not know, will hurt you!

So what are you going to do? Very simply.

1. Filter the water with the highest grade available including but not limited to activated carbon to remove all the unwanted contaminants(1).
2. Ionize the water and separate the positive and negative ions yielding low pH and high pH. This provides acid water to kill bacteria and alkaline water to hydrate the organs.
3. Electrolysis methodology with platinum plates coated with titanium produces a wide range of water that can be used for cooking, bathing, drinking, and medical purposes.

The results of 'ionized electrolysis generated water' provides you with water that is different than most water around the globe. Kangen Water™ is made as a medical grade water. Kangen Water™ is made with a medical device used in the industry for over 50 years and is also available for restaurants, food processing plants, agriculture, and homes. Over 6,500 doctors prescribe Kangen Water™ to treat their patients. Currently there are 500,000 Kangen Water™ units around the globe serving millions of people.

Kangen Water™ is 'LIVE' water that is also found in these places around the globe. Lourdes France, Tlcaote Mexico, Nordenau Germany and Nadana India are some of the places where Kangen Water™ is found naturally. Drinking Kangen Water™ has proved to be beneficial to bringing great health back to people that have health challenges. Including but not limited to these medical problems: High Blood Pressure, Diabetes, Acid Reflux, Gout, Hot Flashes, High Cholesterol, Arthritis, Inflammation, Knee Pain, Back Pain, Stress, Over Weight, Cancer, Heart Disease, Skin Problems, etc....

There are millions of testimonials from people that have regained their health by just drinking Kangen Water™. It is amazing that when you drink Kangen Water™ your body does what it does best, cleanses and uses the minerals in water to bring your health back so you can feel better, stronger, and with the endurance of a younger body.

Do not be fooled by those that tell you they have 'ionized water' and have injected minerals into the water to enhance water for drinking purposes. If you are going to make changes, make sure you look at all the factors, quantitatively and qualitatively. The specifications of what the filtering does, how the ionizers work, and all the functions to produce drinking water. It is not what people do not know. It is what people know that just ain't so!

These chemicals that are found in drinking water are paramount to the business of trying to keep a healthy body. If these chemicals are present, then your body has to work as hard as it can before it fails. Chloroform is used as a solvent and it impairs the central nervous system. Lead causes blood and brain disorder. Floride may weaken bone strength. Human and animal waste decomposition creates nitrates that may impact the immune system. Barium affects the nervous system, causes tremors. Arsenic inhibits oxygen assimilation. Cadmium causes lung damage from batteries, pigments and plastics. Chromium III salts are toxic. Excess amounts of selenium can cause cirrhosis and pulmonary endema. Mercury impacts respiratory and pulmonary functions. Endrin is an insecticide that impacts the nervous system. Lindane impacts the nervous system. Methoxychlor leads to neurotoxicity. Toxaphene damages lungs, nervous system and kidneys.

[2,4-D] causes eye damage. Silvex is a dioxin contaminant.

The EPA has established a maximum legal limit in tapwater for this contaminant. 2,4,5-TP (Silvex) is a banned herbicide. Agriculture (pesticides, fertilizer, factory farms: An Environmental Working Group analysis of 2,4,5-TP (Silvex) tests reported by 20,089 public water suppliers in 40 states shows that between 1998 and 2003, 342 thousand people in 19 communities drank water contaminated with 2,4,5-TP (Silvex). Credits: www.ewg.org

Kangen Water™ is certified as a medical device and prescribed by over 6,500 doctors. Enagic's Kangen Water™ has certification from International Standards Organization with ISO 9001 and 14001 compliance. Kangen Water™ generators are also recognized by over 40 countries as the leading product in water purification methodologies. Your return on water is excellent health with the Kangen Water™ Generator. Drinking Kangen Water™ allows the body to do what it does best, cleanse the organs and provide nutrients to the organs.

1. KDF Filter Specifications:

Kinetic Degradation Fluxion (KDF-55) Water Filters meet EPA and FDA standards for levels of zinc and copper in potable water, is certified by NSF International to its Standard 61 for drinking water.

Applicable against and removes: dissolvable lead, residual chlorine, odors, corrosion residue; chemicals removed: [Chloroform (95%)], [Lead], [Fluoride], [Nitrate], [Barium], [Arsenic], [Cadmium], [Chromium], [Selenium], [Mercury], [Endrin], [Lindane], [Methoxychlor], [Toxaphene], [2,4-D], [Silvex], [Iron], [Hydrogen Sulfide], [Trihalomethanes THM], [RUST-SEDIMENT-TASTE-ODOR]; materials used are granulated antibacterial activated charcoal, lead removing activated charcoal, calcium sulfite mechanical filter; removes 99% of 10 micron particles, 95% of Chlorine @ 1.0 GPM and hundreds of other unwanted contaminants.

You are urged to review each of the contaminants listed in this document and discover the adverse effects of these contaminants as they related to the human body, animals and life itself. What you do not know will hurt you!

COST CONTAINMENT - JUST THE FACTS:

The SD501 makes 3,000 gallons per year for a family of 1 or 6 or 8 or what ever number of family members drink the water. Meaning that in one year and if you use 3,000 gallons as the amount of water you drink, and the cost to replace the filter is \$99 and the cost of the machine is \$3980. So the cost of ownership minus tax, shipping, insurance, finance is \$4080. Kangen Water is created from a registered ISO 9001 and ISO 14001 and certified medical device and considered the highest quality of water available other than the water found in Lourdes France, Nadana India, Nordenau Germany, and Tlcaote Mexico. Kangen Water has properties of 9.5pH, ORP that is 30 times greater than most other water and that has the surface tension (hexagonal water) that is 7 times smaller whether it is bottled, city, river, reverse osmosis, filtered, enhanced and distilled water. So far there is not any competitor that has bottled water that has these properties. Bottling any water with the properties that Kangen Water has only lasts 24-72 hours.

Low cost bottled water from discount stores minus tax, shipping, insurance, finance, and CRV fees is approximately \$0.35 cents per 16 ounces.

High cost bottled water from health food stores minus tax, shipping, insurance, finance, and CRV fees is approximately \$2 per 16 ounces.

You have to compare apples to apples in quantitative and qualitative analysis using PERT. Performance Evaluation and Review Technique. The best case senario and the worst case senario.

City Water:

1. Least cost per gallon using city water right out of the tap is \$0.00115 cents per gallon.
[NOTE] Your health is compromised with 27 contaminates in the city water. City water costs are usually in what is called "BU" or billing units and each billing unit is a quantity of water measured in gallons. As an example of a BU at 748 gallons the cost per gallon is \$0.00115. This works out to a billing unit (BU) of \$0.86 each BU. Therefore drinking city water for a family of four with the amount of 8 glasses of water per day (one glass equaling 8 ounces equates to 8 times 8 for one person at 64 ounces per day and a family of four equates to 256 ounces per day or 2 gallons. The recommended amount of water to drink for an adult of average weight of 140 pounds would be 70 ounces per day. This is based on 1/2 ounce per pound of body weight. In some cases when you have medical challenges it is recommended to drink one ounce per pound of body weight to flush toxins and acids from the body. Using 256 ounces per day or 2 gallons per day for four people equates to about \$0.0023 cents per day based on \$0.00115 cents cost of city water per gallon. Less than a dollar per year or equating to \$0.8395 cents per year for a family of four. This is just for drinking.....not flushing toilets, not washing clothes, not washing dishes, not cooking, not watering, not cleaning, not anything else. Just drinking. If you divide by four then the cost per person is \$0.21 cents per year per person. Or for a group of 100 million the cost to drink water would be \$210,000 dollars per year.

Bottled Water:

2. Most cost per gallon for bottled water available at health stores and convenient marts is

about \$2 per 16 ounces. And other more expensive bottled water is greater than \$2 plus per 16 ounces; example would be LOVE WATER, HEALTHY WATER, SMART WATER, FUN WATER all with marketing schemas that are purchase by the NOT TO SMART PEOPLE. [NOTE] Your health is compromised with water that has had all of the contaminates removed and all of the GOOD minerals removed as well. This is considered DEAD water.

Therefore drinking expensive bottled water for a family of four with the amount of 8 glasses of water per day (one glass equaling 8 ounces equates to 8 times 8 for one person at 64 ounces per day and a family of four equates to 256 ounces per day or 2 gallons per day. The recommended amount for an adult of average weight of 140 pounds would be 70 ounces per day. Using 256 ounces per day or 2 gallons per day for four people equates to about \$32 per day. Less than \$11,680 dollars per year a family of four or \$2920 per person per year . This is just for drinking.....not flushing toilets, not washing clothes, not washing dishes, not cooking, not watering, not cleaning, not anything else. Just drinking. Or for a group of people of 100 million the cost to drink expensive bottled water would be in the billions trillions, \$292,000,000,000 dollars per year. (\$292 billion dollars per year).

3. Low cost per gallon for bottled water available at discount stores and supermarkets cost of \$0.35 per 16 ounces. Not including tax, shipping, CRV fees, etc.

[NOTE] Therefore drinking low cost bottled water for a family of four with the amount of 8 glasses of water per day (one glass equaling 8 ounces equates to 8 times 8 for one person at 64 ounces per day and a family of four equates to 256 ounces per day or 2 gallons. The recommended amount for an adult of average weight of 140 pounds would be 70 ounces per day. Using 256 ounces per day or 2 gallons per day for four people equates to about \$5.60 per day. At \$5.60 per day per year for a family of four equates to \$2,044 per year for a family of four. This is just for drinking.....not flushing toilets, not washing clothes, not washing dishes, not cooking, not watering, not cleaning, not anything else. Just drinking. If you divide by four then the cost per person is \$511 per year. Or for a group of people of 100 million the cost to drink water would be \$51,100,000,000 dollars per year (\$51 billion dollars per year).

Processed Kangen Water:

4. Medical Device Grade water that requires a machine to change the properties of the water so that it is a healthy water is based on one year of using a \$4000 medical device that creates 3,000 gallons before any other costs are required to be included. Using the same facts of 2 gallons per day per family as in city water, expensive bottled water and low cost bottled water, the cost per person is figured at 1/2 gallon of water per day or 183 gallons per year per person. At 3000 gallons usage per year you can provide water to 16 people per year with water. This equates to \$250 per year person. This costs one person \$0.69 cents per day for Kangen Water. Then you have to add the cost of city water at less than 1 cent per day per person. Or, \$0.70 cents per day per person. Or for a group of people of 100 million the cost to drink Kangen Water would be in the trillions, \$25,700,000,000 dollars per year. (\$25.7 billion dollars per year).

Example:

I used 6,000 gallons of water in one year. This accounts for cooking, drinking, cleaning & sterilizing foods and vegetables, cleaning the kitchen and bathroom, etc. and giving water

to people that do not have the Kangen Water Generator, and making water at selected places in my travels. In Texas was the most water I have ever made in one night, 95 gallons. I had to buy the filter before the year was up so I have to add \$100 more for another filter and 4 cleaning cartridges at \$16 each which totals \$64 dollars to the total price of \$4164 per year. So 6,000 gallons cost me \$0.694 cents per gallon for one year of using the Kangen Water Generator. And since the Kangen Water Generator cost of \$4164 for one year plus expenses and travel costs are totally tax deductible. This quates to \$0.70 per day per family of two, or how ever many I gave water to in one year the cost is the same. So \$0.70 per day and 365 days a year the cost is \$256 plus \$0.84 cents for one year of city water, or \$257 per year.

Comparison:

City Water:	\$0.84 per year per family of 4 or 730 gallons per year.
Expensive Bottled Water:	\$11,680 per year per family of 4 or 730 gallons per year.
Low Cost Bottled Water:	\$2,044 per year per family of 4 or 730 gallons per year.
Kangen Water:	\$257 per year per family of 2 or 6,000 gallons per year.
